# Submission Worksheet

## Submission Data

**Course:** IT265-002-S2026
**Assignment:** IT265 Case Study - Color Theory
**Student:** Daniel K. (dk72)
**Status:** Submitted | **Worksheet Progress:** 100%
**Potential Grade:** 10.00/10.00 (100.00%)
**Received Grade:** 0.00/10.00 (0.00%)
**Started:** 2/23/2026 5:43:50 PM
**Updated:** 2/23/2026 8:26:15 PM
**Grading Link:** https://learn.ethereallab.app/assignment/v3/IT265-002-S2026/it265-case-study-color-theory/grading/dk72
**View Link:** https://learn.ethereallab.app/assignment/v3/IT265-002-S2026/it265-case-study-color-theory/view/dk72

## Instructions

Step 1: Recommended to use your original choice from the Atari Case Study, but if it's just black and white a different retro game of your choice may be picked (preferably first-generation systems or older).

- For reference, here are the links from the prior assignment:

- https://www.free80sarcade.com/all2600games.php
- https://games.aarp.org/category/atari-games
- https://playclassic.games/games/action-atari-2600-games-online/keystone-kapers/play/
- https://www.tripletsandus.com/play-classic-80s-arcade-games/play-atari-2600-video-games/

Step 2: Analyze the color/design further and come up with a modernized sketch/outline/etc per the below tasks. I understand not everyone is an artist (neither am I) hence the goal of these are sketches, but you're free to be more elaborate.

Step 3: Save the worksheet. Export the PDF. Upload it to GitHub. Upload the PDF to Canvas.

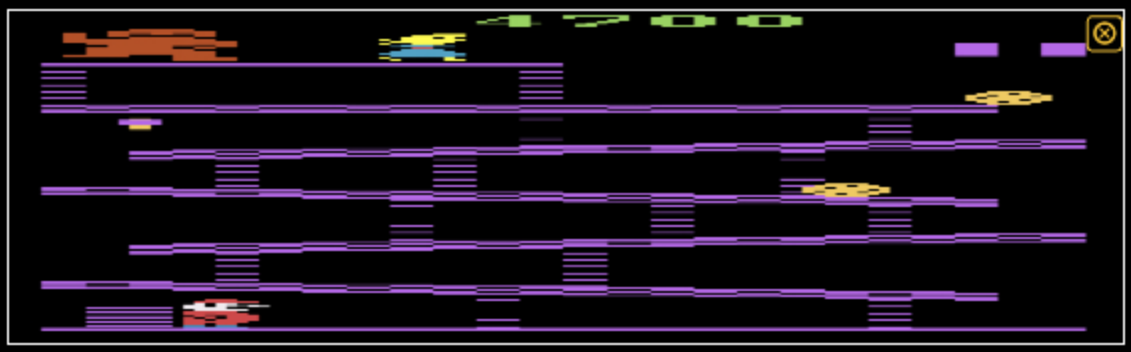
# Section #1: ( 2 pts.) Exploratory Analysis Of Original Game

Progress: 100%

### Task #1 ( 0.67 pts.) - Color Schemes Identification

Progress: 100%

**Details:**
Include relevant screenshots of the game. You don't need to go crazy with this but do capture the essence.



Level 1.

Saved: 2/23/2026 5:43:53 PM

## Task #2 ( 0.67 pts.) - Analyze how these colors contribute to the game's atmosphere

Progress: 100%

Your Response:

These colors are effective at communicating exactly what they are to the player. With regards to the atmosphere, the purple and mildy desaturated tones place the time at night.

Saved: 2/23/2026 5:48:17 PM

## Task #3 ( 0.67 pts.) - Compare with a modern equivalent

Progress: 100%

**Details:**

- Mention the comparison game (can be more than one game)
- Compare the use of color to the modern game and highlight how color usage evolved (or devolved)

Your Response:

There is a Donkey Kong reference within one of Mario Kart World's race tracks. This track pays a homage to the original Donkey Kong by keeping the general layout similar. Though in terms of color the games are at the polar opposites of each other. Mario Kart World's track uses bright reds, blues, & yellows throughout to make it eye catching for the player. The rest of the game is also bathed in these saturated, vibrant tones that evoke a sense of joy and whimsy.

Saved: 2/23/2026 5:51:04 PM

# Section #2: ( 2 pts.) Creative Conceptualization For Redesign

Progress: 100%

## Task #1 ( 1 pt.) - Modern Mood/Theme Proposal via Color

Progress: 100%

**Details:**

- Propose a revised mood or theme for the game, justified with a new color scheme
- Explain your choice of colors using color harmony rules (e.g., analogous, complementary)

Your Response:

My proposal would be to set the game during the daytime instead of the night. Naturally this would mean the color palette would shift to accomodate this. To go with the daytime tones, I would change the purple I-beams to a more saturated red. The barrels would still remain yellow, but I would increase the saturation on them slightly to keep them highly visible. The ladders would be colored differently to differentiate them from the I-beams. I would pick a deep blue for the ladders.

Red & yellow are close to each other in hue, but blue provides a great contrast by being opposite complementary with red.

Saved: 2/23/2026 6:02:15 PM

## Task #2 ( 1 pt.) - Narrative Enhancement Through Color

Progress: 100%

**Details:**

- Explain how color can be used to enhance storytelling within the game (this may be a stretch in some cases, but answer it the best you can)
- Provide examples/descriptions that illustrate your narrative color choices

Your Response:

Color helps to distinguish who is what & the purpose they serve within a video game.

By looking at cultural connonations certain colors have, it becomes evident why a certain color was chosen. Pauline's blue dress & purple belt are lighter hues compared to that of Jumpaman's standard red. The light blue communicates that Pauline is the damsel in distress and implies she cannot fight for herself. Donkey Kong's solid brown color is not neccesarily "evil", but using it on his comparatively big design helps to sell

his intimidating presence. Jumpman's color scheme makes it clear he is the protagonist. The red overalls stand out compared to the environment & the rest of the cast.

# Section #3: ( 2 pts.) Design Sketching And Color Application

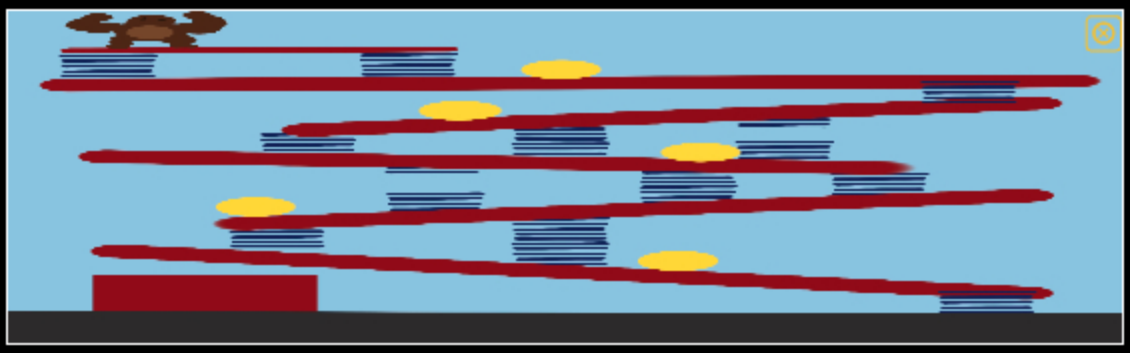
Progress: 100%

## Task #1 ( 1 pt.) - Gameplay Mechanics and Color Integration

Progress: 100%

**Details:**

- Sketch gameplay elements or mechanics enhanced by your new color scheme (excludes interface as it's a different question/task)
- Provide concept art that showcases the updated visual style
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.



Updated visuals

Saved: 2/23/2026 7:16:36 PM

## Task #2 ( 1 pt.) - Explain the choices of your sketches

Progress: 100%

**Details:**

- Describe how these color choices affect player interaction and engagement
- Explain the rationale behind each color choice and its expected impact

Your Response:

The blue background hmakes the colors more vibrant overall. The red I-beam platorms help to make it easy to distinguish compared to the other game elements. Blue ladders differentiate from the platforms while being easy to see at the same time. The barrel obstacles being yellow are also easy to distinguish and register while playing.

Saved: 2/23/2026 7:18:26 PM

# Section #4: ( 2 pts.) Audiovisual Reimagining And Ui/ux Modernization

Progress: 100%

## Task #1 ( 0.67 pts.) - Complementary Sound Design

Progress: 100%

**Details:**

- Briefly outline how sound design complements the visual color scheme
- Mention if specific audio cues align with color changes or themes (use details)

Your Response:

There are no color changes tied to specific audio cues.

The sound design allows the player to know when they've dodged, walked, climbed, destroyed a barrel, or jumped over one successfully.

Saved: 2/23/2026 7:21:38 PM

## Task #2 ( 0.67 pts.) - UI/UX Color Scheme

Progress: 100%

**Details:**

- Sketch UI/UX elements highlighting the integration of your new color scheme
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

UI/UX update

Saved: 2/23/2026 7:23:28 PM

## Task #3 ( 0.67 pts.) - UI/UX Color Functionality

Progress: 100%

**Details:**
Detail how color enhances usability, player feedback, and overall aesthetic. Include considerations for accessibility.

Your Response:

The UI/UX elements being white are immediately noticeable compared to the other game elements on screen. White is also relatively nonobtrusive if used sparingly, which is what my example aims to show. The pause indicator and score/timer are noticeable, but they do not cause visual conflict with the rest of the game.

Saved: 2/23/2026 7:25:24 PM

# Section #5: ( 2 pts.) Reflection

Progress: 100%

## Task #1 ( 1 pt.) - Reflection on Color Theory in Game Design

Progress: 100%

**Details:**

- Reflect on how the application of color theory principles can transform the player experience
- Discuss challenges faced in applying color theory to a classic game

Your Response:

Proepr application of color theory can greatly enhance a player's enjoyment of a game. Color helps to distinguish different game elements and effectively communicate what does what without having to read what an item does.

The limited color palette was the most challenging part of applying color theory principles to a classic game. For Donkey Kong, this was easier as there was a clear protagonist, villain, and plot

protagonist, villain, and plot.

Saved: 2/23/2026 7:28:16 PM

## Task #2 ( 1 pt.) - Personal Learning Experience

Progress: 100%

**Details:**

- Share insights gained from this assignment, particularly in relation to color's impact on game aesthetics and mood
- Evaluate the effectiveness of your redesign choices based on color theory

Your Response:

Color theory can be leveraged to sell a particular atmosphere or vibe. Having a coherent palette allows a game world to feel connected and unified.

Based on color theory, my redesign does an ok job in terms of effectiveness. To improve on it, I would go back and choose a more coherent color palette
